

WANTED

Find and learn the wild species you can see in your everyday life.

Join Rutgers' 13th PERSONAL BIOBLITZ 2026

When? 76 days, **1 March to 15 May 2026**, 24/7, anywhere on Earth.

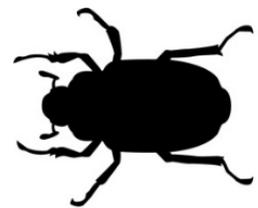

How? Discover, see, listen, photograph, share, identify and learn (and get help, beginners welcome!), upload your finds to our iNaturalist project.

Why? Learn more about what exist right next to you - birds, trees, tiny critters, algae, fungi, insects, lichens, mollusks, wildflowers, mammals... Explore the total wild biodiversity around you, wherever you are.

Who? Anybody associated with Rutgers University or previous blitzers in any way. Challenge your family or friend, who can discover more?

What? Any wild species anywhere in the world that you personally experience (special rules apply, see website).

All species observed as part of this iNaturalist project will be added to the insanely fast-growing amount of community observations that is used for global biodiversity science and leading to new discoveries.
